Equishift Joins Health Wildcatters to Advance AI-Powered Hospital Staffing

(Dallas, Texas) – September 10, 2026 — Equishift, an AI-powered demand forecasting platform transforming hospital staffing, has been selected to join the 14th cohort of the nationally recognized Health Wildcatters Accelerator at Pegasus Park in Dallas.

Equishift predicts patient volume and generates shift-specific staffing recommendations to help hospitals better align clinical resources with anticipated needs. By improving hospital workforce planning, the platform aims to reduce reliance on costly travel staff, minimize over- and understaffing, lower labor costs, and reduce clinician burnout.

Snehita Sana, Founder and CEO of Equishift: “We’re so excited to be joining Health Wildcatters! Hospitals are under enormous pressure to run more efficiently, often at the expense of clinicians. This program will accelerate Equishift’s mission to build a future where efficiency and clinician wellbeing can thrive together.”

“We are excited to welcome Equishift to our 14th accelerator cohort,” said Dr. Hubert Zajicek, CEO and co-founder of Health Wildcatters. “Their application of AI to workforce planning addresses one of healthcare’s most persistent operational challenges, with the potential to improve staffing efficiency while supporting clinicians and health systems.”

As part of the accelerator, Equishift will participate in Health Wildcatters’ 12-week program, gaining access to mentors, healthcare leaders, investors, strategic partners, and resources to support commercialization and growth.

The program will culminate with Health Wildcatters’ annual Pitch Day in November 2026, bringing together investors, corporate partners, healthcare leaders, and members of the North Texas innovation community to hear from the startups participating in the 2026 cohort.

About Equishift

Equishift is an AI-powered demand forecasting platform transforming hospital staffing. The platform predicts patient volume and generates shift-specific staffing recommendations, with a financial ROI calculation attached to each. By improving hospital workforce planning, the platform aims to reduce reliance on costly travel staff, minimize over- and understaffing, lower labor costs, and reduce clinician burnout.

About Health Wildcatters

Health Wildcatters is a Dallas-based seed accelerator and investment firm, consistently recognized among the nation's top healthcare accelerators. Over the past thirteen years, it has built a portfolio of 140 companies driving innovation in digital health, medical devices, diagnostics, and biotech. Collectively, these startups have raised more than \$350 million to advance healthcare solutions worldwide. Through its flagship accelerator program, Health Wildcatters provides early-stage capital, expert mentorship, and access to a robust network of investors and industry leaders.
