

Friends of Steward Observatory

Supporting Astronomy Students

Fueling Astronomy's Future

For over a century, the diverse and talented students, staff, and faculty of the Steward Observatory and the Department of Astronomy have explored the Universe together and shared what we have learned with the entire world through our educational and outreach programs.

The students and post-doctoral researchers we have trained, and our faculty;

- have helped prove the existence of dark matter
- Discovered that the expansion of the Universe is accelerating, and
- made the first image of the event horizon of a massive black hole.

Your Support Will Make a Difference

To a student, every dollar of a scholarship is incredibly valuable.

Friends of Steward Observatory scholarships not only help students with expenses, but boosts their self-esteem and inspires them to do their best.

Inspiring Education and Research

We sustain one of the largest and innovative communities of researchers and students on the planet.

- Our 70 tenure track and research faculty support close to **200 undergraduate majors, 85 graduate students and 30 post-doctoral fellows**, helping them become the next generation of world leading researchers.

Developing the expertise and early careers of undergraduate and graduate students is an essential component of **building and sustaining our strong and diverse science community**.

During these formative stages of development students have

- Access to all our facilities, observatories and computing resources to pursue their research.
- We provide students the chance to both succeed and fail, as they **grow their skills, experience and the confidence necessary to take on the challenging problems of the future**.

These opportunities are priceless, but providing them requires funding.
